WOOD'S CROP SPECIAL

Giving Timely Information and Prices of Seasonable Seeds

PUBLISHED BYOT.W.WOOD & SONS SEEDSMEN RICHMOND VA

VOL. XVII.

OCTOBER EDITIO N

1922

Our "Wood's Crop Special" is issued monthly during planting seasons. There is no subscription price, but is mailed free upon request. If any of our customers do not receive Wood's Crop Special regularly, and desire to do so, advise us and we will place your name on our regular mailing list.

SEASONABLE NOTES

We all remember the old adage regarding the sowing of wheat:

"Sow in clay, reap you may; Sow in dust, reap you must."

This was practised for many years by our forefathers, for they knew the wheat would lie uninjured in perfectly dry ground and sprout evenly and satisfactorily when the delayed rains did come.

In connection with the offer of mixed wheat to sow for grazing or hay, on the last page of this issue, we would mention the desirability of wheat for a hay crop. Breeders of thoroughbred horses use wheat hay, and consider it one of their most valuable feeds; and it is as nutritious for other stock.

When the wheat crop is cut for hay, it is done before the grain matures, while straw and head are in the milk state. Handled in this way it cures up well and makes a large yield of valuable feed.

RYE can also be sown in October; and in fact, later in the fall than other grains, as it can stand more cold than the others. The PIEDMONT WINTER RYE is a Southern-grown rye, and makes an earlier growth and is better suited to the South than the Rosen Rye. The ABRUZZI is the earliest of all Southern-grown ryes, and where a grain yield is desired in the South, the AbbruZZI is the surest cropper.

Where early pasturage is desired, we recommend either the **Abruzzi** or the **Piedmont Rye**, and for turning under the crop for soil improvement the **Rosen**, as the latter will meet all requirements for a crop to turn under, though for use as an early grain crop in the South it is not so desirable.

DWARF ESSEX RAPE can be sown all through October south of Virginia. It makes the quickest grazing, being usually ready in six or eight weeks from time of sowing, and it makes a full pasturage which is greatly relished by stock, especially sheep. It is sown at the rate of 3 to 5 pounds to the acre in drills, or 6 to 8 pounds to the acre broadcast:

SEED WHEAT FOR PROFITS

We are advising all our farmers in the East to put in their usual acreages, or even more land, in wheat this year. There are several reasons for this: In the first place, the new tariff law, just put into effect, puts a duty of 30 per cent. on all importations of foreign wheat. Canadian wheats, therefore, cannot come into the United States except at an increased cost of 30 cents per bushel to cover this duty.

Then from reports received from the Middle West, that section does not seem to be making any great preparation for an increased acreage in the winter wheat crop this year. In fact, unless there is a change in the attitude of farmers there, the wheat acreage in that section will be less than usual.

Then again, Uncle Sam's exportations of wheat to Europe have since the first day of July been of very large volume, and they are still keeping up, and we really have no great surplus of either wheat or flour in the United States at the present time.

These conditions seem to us to justify the expectation of good prices for wheat in this country next year; and if by any chance we should have a shortage by crop failure in any part of the United States, high prices will naturally follow.

The Seed Wheats we offer, most of which were grown on limestone land in the Shenandoah Valley of Virginia, are not only from fields that made large yields, but the grain shows a full, plump berry. The yields, in a comparatively poor wheat year, ran generally from 25 to 30 bushels to the acre.

We always procure our wheats from the best wheat-producing sections and from the most productive crops. What this means to the planter can only be fully shown by comparison of the result from sowing our wheat with that of ordinary farmers' run of wheat grown on soil not especially adapted to the production of this crop.

"Leading Wheat Distributors Choose Wood's."

Practically all of the Seed Wheat sown in this immediate section was your seed, as we distribute practically all that is used near us. We advise the use of new seed each year unless the farmer is well equipped to clean his seed, and we want to reiterate at this time that we were very much pleased with the kind of seed you sold us this past fall. We never handled a better lot of seed, even from you, and we are sure that the results obtained from this type of seed can always be expected to be satisfactory.—DARLINGTON ROLLER MILLS, Darlington County, S. C., July 20, 1922.

CHOOSING YOUR WHEAT

The bearded varieties of wheat are considered best for milling purposes, and millers everywhere are recommending these varieties in preference to the beardless types. The grains are slightly larger than the smooth head varieties, and they usually test from one to two pounds more per measured bushel, and on account of their more flinty nature are better adapted for milling.

The varieties of bearded wheat we now offer are Stoner,

Fulcaster and Red Wonder.

The STONER will withstand adverse weather conditions, and on account of its stooling-out properties and hardiness is usually one of the best yielders. For rich land, where other bearded wheat has been found to lodge badly after storms, we recommend Stoner Wheat. We have this grown on limestone land.

FULCASTER wheat withstands rust better than any other variety, and we would plant it in preference to others where this trouble has appeared. It is also a very heavy yielder.

RED WONDER has been found to do well on dry as well as extremely low land, and to resist drought and stand cold. A farmer in Goochland County, Virginia, said that after growing different varieties of wheat in Virginia for eighteen years, he found the **Red Wonder** had broken all records in yield.

For uplands and light soils the beardless wheats are generally preferred. Of these, **LEAP'S PROLIFIC** is the most popular. Many of our customers have reported yields of three to five bushels more to the acre than of other kinds. We can furnish this from limestone land.

The **RED MAY** and **FULTZ** are two of the best beardless varieties, and are very popular throughout the South Atlantic States.

The PURPLE STRAW, or BLUE STEM, also beardless, continues popular, especially in the southernmost wheat-growing sections. It is one of the earliest, and we recommend it highly for both South Carolina and Georgia.

SEED OATS

Best results are usually obtainable from fall sowing, as oats require cool, growing weather and plenty of moisture for bumper crops. They can be planted as late as November, after corn and tobacco are cut, and make an excellent winter cover cop. For early seeding we recommend the Virginia Gray Winter, and the Fulghum for late seeding.

FULGHUM OATS are of the rust-proof type, and one of the earliest and largest yielding of either spring or fall sown oats. We have made thorough tests of all oats, both fall and spring seedings, and have found the Fulghum has no equal in yield, growth or maturity. Stools out well and produces large, full heads of fine, plump grains, and strong straw that stands about 3½ to 5 feet high. We strongly recommend this variety to our customers, believing it to be the very best variety for either fall or spring sowing. Fulghum Oats are ready to cut just ahead of wheat, so the harvesting of the two crops will not conflict, and this advantage should be considered when arranging your work for next summer's harvest season.

VIRGINIA GRAY WINTER OATS are later in maturity than the Fulghum, and are usually ready to cut after wheat harvest. This variety is very popular on account of its hardiness, withstanding the most severe winters. The Virginia Gray Winter stools out better than any other fall sown oats, and is consequently a very heavy yielder. Our test of this variety showed up remarkably well, growing to a height of 3 to 4 feet, with large, well-filled heads. Sow early in October for best results.

ARLINGTON BEARDLESS BARLEY

BARLEY is a valuable crop for sowing in the field for late fall, winter and spring grazing. It also makes a good hay crop when cut in the green state. Barley is considered to make stronger and more nutritious feed than any of the grain crops, and it is increasing in popularity all throughout the South. It is a well-established fact that horses fed on crushed barley do not suffer as much from heat as when fed on other grains.

We have been particularly pleased with **ARLINGTON BEARDLESS BARLEY.** Wherever tried it is preferred to the bearded, whether for grazing or for harvesting as a grain crop.

A customer in Albemarle County, Virginia, wrote us:

"Arlington Beardless Barley makes fine hay; stock like it so much better than rye, and it is just as early. Cut mine the last of April, two weeks ahead of crimson clover."

HAIRY VETCH

Vetch is a wonderful soil improver and thrives on practically all types of soil. The hay is greatly relished by all kinds of live stock, and on account of its large per cent, of protein it is highly recommended for its fattening qualities.

For winter cover crop or soil improver, the **Hairy Vetch** may be sown alone at the rate of forty to fifty pounds to the acre. For hay, however, we consider it better to sow with oats, and our preference has been the rust poof type for this purpose. The proportions we sow are 3 pecks of oats with 25 to 30 pounds of vetch to the acre.

All through October you can sow Hairy Vetch with oats, and we recommend the FULGHUM OAT in preference to others for this purpose. South of Virginia this combination can be put in even in November. We know of no other crop that, sown in the fall, will make better hay in the late spring. In addition, oats and vetch furnish good grazing in the winter and early spring, and vetch itself comes next to clover in value as an improver of the soil.

WOOD'S GRAIN PASTURE MIXTURE

This mixture produces an abundance of pasturage during the fall, winter, spring and early summer. For a quick-growing, one-season pasture it is unsurpassed, and no other mixture is so economical where grazing is desired in shortest possible time after sowing, to continue through the months when pasturage is most needed.

It contains the best grazing varieties of oats, rye, barley, wheat, vetch and rape, combined in the proper proportions to give best results.

EARLY PASTURE FOR PROFIT

The raising of live stock seems to promise more profitable returns to the farmer the coming season than for several years. Lambs, for instance, have been recently selling on the Chicago market at \$14.00 per 100 pounds, and conditions warrant high prices this fall and through the early spring months. To produce early lambs, it is important to give sheep the first early grazing that is possible, green pasturage being an absolute necessity for them.

An abundance of pasturage, and probably the fullest and longest lasting through the spring and early summer, is made by sowing **WOOD'S GRAIN PASTURE MIXTURE.** It is quick in growth, and no other annual mixture is so economical where grazing is desired not only in the shortest possible time, but also to continue through the months when pasture is most needed. It contains the best gazing varieties of oats, rye, barley, wheat, vetch and rape, combined in the proper proportions. Sow at the rate of 2 bushels to the acre.

SOW LAWN GRASS SEED

Early preparation of land for lawn grass in the fall is advisable, to insure a good green appearance the coming winter and spring.

Our Lawn Circular, which we will send free upon request, gives full information about the making of lawns under different conditions, and we are glad to answer the special inquiries of our customers concerning their lawns and grounds about the home.

wood's EVERGREEN LAWN GRASS is composed of only the finest growing turf grasses, and is especially suited to sowing on lawns where special care and attention can be given.

WOOD'S PERMANENT LAWN GRASS is a mixture of more redust growing grasses, and is put up for sowing on parks or large grounds where special care cannot be gived.

We have recently added to our business a Special "Golf Department." This department is in charge of experts of many years' experience and who are thoroughly conversant with all applying to Golf Courses in the Southern States.

Inquiries addressed to our Golf Department will receive prompt attention.

Our New Fall Catalog gives the most up-to-date information regarding both field and garden crops. If you have not received a copy, write for it today. Free upon request.

If you are interested in lawns or public grounds, let us send you our Lawn Circular. You will find it helpful.

Prices of Field Seeds are always subject to market fluctuations. We always fill all orders entrusted to us at lowest ruling prices on date order is received. If prices decline, we give our customers the benefit of it. If they advance, we charge the advance prices. In case customers desire to limit us to filling orders at prices quoted on any particular date, they will kindly so state on order. Mention date and number of "Wood's Crop Special" upon which the order is sent.

Terms on all Field Seeds, net cash. Customers who have no regular accounts with us will kindly remit the amount with their order or name business reference as customary before opening new accounts.

While we exercise great care to have all seeds pure and reliable, we give no warranty, express or implied, as to description, quality, productiveness, or any other matter connected with the goods we send out, and will not be in any way responsible for the crop. Every order for articles named in this price-list will be executed on these conditions only.

WOOD'S HIGH-GRADE POULTRY **MANURE**

This valuable fertilizer, which we are offering now for the first time, is suited to the use of amateur or home gardeners as well as florists. Its plant food content is easily available, and for forcing purposes in the hot house it has no superior, and is also valuable for the outdoor garden. It contains no noxious weed seeds and is easy to apply. Its value is so well known that we are confident there will be a great demand for it by growers of both flowers and vegetables. 25 lbs., \$1.00; 50 lbs., \$1.60; 100 lbs., \$2.75; ton, \$48.00.

WOOD'S HIGH-GRADE SHEEP MANURE

This has been called the supreme fertilizer for making velvety lawns and luxuriant gardens. It is a natural fertilizer providing humus and fertility to the soil. Our brand of this is thoroughly sterilized so as to be free from weed seeds without lowering its content of ammonia, and it is always ready for use. We have had surprising results with our flowers after applying it. Per 25-lb. bag. 80c.; 50-lb. bag, \$1.40; 100lb. bag, \$2.50; ton, \$45.00.

WOOD'S GRAIN PASTURE MIXTURE

Will provide an excellent quick pasturage during the fall, winter, spring and early summer.

Sow during August, September or Cctober, at the rate of 2 bushels per acre.

Per bushel (50 pounds), \$1.40; 5 bushel lots and over, \$1.35 per bushel. Sacks included.

SEED WHEAT

The Seed Wheat we offer is thoroughly recleaned and of fine quality. This should be especially noted the present season; because unfavorable weather conditions at time of harvest time resulted in comparatively little fine Secd Wheat being made in the eastern part of the United States, and good wheat is going to be scarce. Write for samples.

Prices include new grain sacks.
